

With me in the team, the Health pillar cannot fall below 1.

Chef

My team can choose to pick two puzzle pieces instead of one. This ability can only be used once.

Coastal Shellfish Farmer

My team places their pawn at the top of the Biodiversity pillar to start the game.

Marine Ecologist & Climate Researcher

My team can choose to skip one Tide Turn card during the game. This ability can only be used once.

Deep-Sea Fisher

Importance
I help bring good, responsibly caught seafood to people and use my skills to help others make smart, healthy choices.

Daily tasks
I create menus with local, sustainable seafood, teach people about their food, and work with fishers, farmers, and staff to make good choices.

Challenges
I find it hard to always find a supply of sustainable seafood, keep prices fair, and help customers make better choices in a busy, fast-food world

Importance
I produce shellfish responsibly to feed people with healthy products and help protect wild species from being overfished.

Daily tasks
I grow oysters and mussels, check the water to keep them healthy, ship fresh shellfish to stores and restaurants, and teach others why farming seafood responsibly is important.

Challenges
I have a hard time with pollution and warming waters that hurts shellfish, high costs and big farm competition, and getting people to trust farmed seafood.

Importance
I connect scientists, businesses, and leaders to protect marine life and keep oceans healthy.

Daily tasks
I study how climate change affects marine life, help set safe fishing quotas, work with leaders on policies related to the ocean, and team up with fishers to protect the sea.

Challenges
I find it tough to get leaders to take scientific data into consideration, find money for important research, and fight misinformation about climate change and fishing.

Importance
I speak for fishers who catch species deep in the ocean trying to make money while protecting marine life.

Daily tasks
I spend weeks at sea catching seafood very deep in the water, apply fishing rules including on my choice of fishing gear, work with inspectors, and protect marine life while earning a living.

Challenges
I'm under pressure to catch more fish, deal with fish moving and endure worsening weather due to climate change. Not to mention my job is dangerous and physically demanding.

---	---	--	---

Importance
I choose responsible seafood and help the industry by supporting fishers and sellers who do the right thing.

Daily tasks
I care about where seafood comes from, pick eco-friendly options, try new seafood recipes, and teach my community about making smart seafood choices.

Challenges
I find seafood labels confusing, try to save money while choosing sustainable options, don't always know how to avoid waste and sometimes can't find responsibly sourced seafood nearby.
